SUMMARY

Rising senior in Data Science at Penn State with three internships spanning AI/ML, full-stack engineering, and enterprise analytics, most recently building multi-agent LLM systems (LangGraph, Claude, GPT). Seeking full-time AI/ML Engineering roles beginning May 2027.

EDUCATION

B.S., Data Science

Graduating May 2027

Pennsylvania State University, University Park, PA

TECHNICAL SKILLS

Programming Languages: Python, SQL, C#, JavaScript, HTML, CSS

Machine Learning & AI: LangChain, LangGraph, LLM Integration (Claude, GPT), NLP, Regression, Classification, Clustering, Anomaly Detection, scikit-learn, RAG

Frameworks & Web: FastAPI, Flask, Streamlit, Next.js, React, REST APIs

Data & Cloud: Power BI, Supabase, Google Cloud Firestore, DigitalOcean, MySQL, Railway

PROFESSIONAL EXPERIENCE

Ampcus Inc., Chantilly, VA: AI Engineering Intern

June 2026 – July 2026

- Designed and shipped two multi-agent LangGraph AI platforms end-to-end, ClaimPilot AI and ElderGuardian AI (detailed under Projects), automating medical claims processing and elder fraud detection
- Owned full-stack architecture for both: Next.js/TypeScript frontends, FastAPI backends on Railway, Supabase databases, and human-in-the-loop review workflows

Datachamps.ai, India: Data Science Intern

May 2025 – July 2025

- Engineered an AI chatbot (GPT, LangChain, NLP, RAG) for question answering over structured and unstructured company data, with a Streamlit interface for interactive insights
- Built Flask backend APIs with Google Cloud Firestore, published internal Python packages on PyPI, and deployed on DigitalOcean

KPMG, India: Data Science Intern

June 2024 – August 2024

- Analyzed large datasets with Python, SQL, and presented analytics and insights using different data visualizations in Power BI on the TE-SAP project team

PROJECTS

ClaimPilot AI

Ampcus Internship, 2026

7-agent LangGraph platform automating end-to-end medical claims processing (github.com/anishhchitnis/claimpilot-ai).

- Trained a GradientBoosting denial-risk model and an Isolation Forest fraud detector, explained via SHAP for real-time risk scoring
- Implemented a deterministic scrubbing/adjudication engine enforcing real billing edits (NCCI, MUE, modifier 25, timely filing) with 835/ERA reconciliation and AI-drafted appeal letters

ElderGuardian AI

Ampcus Internship, 2026

5-agent LangGraph early-warning system for elder financial exploitation risk (github.com/anishhchitnis/elder-guardian-ai).

- Detected exploitation patterns in bank transactions with Isolation Forest, an LSTM autoencoder, and NetworkX; generated Claude risk explanations and SMS/email alerts (Twilio, Resend)

Housing Market Price Prediction

April 2024

Multiple linear regression model predicting house prices (Python, pandas, NumPy).

- Achieved 79.20% prediction accuracy through iterative feature engineering and parameter tuning
